

QTA-150

Clear Polystyrene Adhesive 17kg canister

Features

- Ease of Application
- Fast Bond Time
- Long Open Time
- High Bond Strength
- 17 sqm per kg
- Shelf life 1 year

Application

All surfaces to be bonded should be dry, clean, dust and grease free. To apply hold the gun parallel to the work surface and administer a generous coat of adhesive, coverage of at least 80 to 100% is recommended.

Before bringing the two substrates together ensure that the adhesive is allowed to tack up, i.e. to be able to touch without any transference to the fingers. You can now bring the surfaces together using uniform pressure and the workpiece can be instantly handled.

It is important to test all the substrates to be bonded before going into production or undertaking a large contract. It is the responsibility of the user to ensure the adhesive's suitability to the substrates. If you are unsure, please do not hesitate to contact us and we will be more than happy to assist.
